

SC Series

Carbon Black • SC159 • SC119 • SC419

SC159 was developed as a highly conductive carbon black. SC159 imparts electrical conductivity to rubber and plastic products at low loading levels.

SC119 was developed as a cost effective conductive carbon black. SC119 imparts electrical conductivity to rubber and plastic products while also offering improved processability.

SC419 was developed as a static dissipative carbon black that features improved conductivity and processability over semi-reinforcing grades of carbon black.

TYPICAL APPLICATIONS

- Any rubber or plastic application where increased conductivity is required
